

Priority at junctions:

Right turn (minor road to major road)

The right turn is one of the most dangerous manoeuvres a cyclist can make as they need to cross the lanes of oncoming traffic. A minor road could have either a Give Way, Stop line or no road markings. If there are no road markings, treat the junction as a Give Way. You need to think about who has priority and how you are going to deal with other traffic and pedestrians.

Take a look at the diagram below: Cyclist **A** is approaching a junction and wants to turn right. Number the 6 steps in the circles below into the correct order from 1-6.

- | | | | |
|-----------------------|---|-----------------------|---|
| <input type="radio"/> | Put both hands back on handlebars. | <input type="radio"/> | Check both ways at the junction for other traffic. |
| <input type="radio"/> | Look back as you approach the junction. | <input type="radio"/> | Give a lifesaver look back. |
| <input type="radio"/> | Give way lines – if it's safe to go, cycle straight across, making the turn without cutting the corner. If there is traffic coming you will need to stop. Reset the pedal and then follow the iCycle system when the road is clear. | <input type="radio"/> | If it's safe, signal clearly with the right arm – hold the signal and move out towards the centre line. |
